

NEW!

Silver Condor Cabin

AN EXCEPTIONAL COMBINATION OF PRACTICALITY, COMFORT AND PERFORMANCE

Silver expands its lineup with the new Condor Cabin model. This impressive eight-meter-long (approx. 26 ft) cabin boat offers an ideal combination of practicality, comfort and performance in its size class, meeting and exceeding the expectations of even the most demanding boaters. World premiere is at the Helsinki Vene25 Boat Show 7-16 February 2025.

Condor Cabin has an attractive design with a large and adaptable aft deck and an ergonomically designed cabin that comfortably seats up to six passengers. Due to the hull design the novelty has practically no planing threshold, which ensures that the boat moves smoothly through choppy seas and cuts waves effortlessly with good fuel-efficiency.

The standout feature of the Condor Cabin is its spacious and flat 3.5 m² aluminum aft deck (199 x 176 cm), which is especially designed to facilitate demanding transport and work-related tasks. The stern deck has robust load securing loops on the flooring as standard, making it easy to secure packing for transport. Fixed storage boxes, that double as extra seating, can be added to the open stern.

The stylish fiberglass cabin is ergonomically designed, positioning the driver slightly higher than the other passengers at the center of the boat, with all controls easily within reach. Both the driver's and co-driver's seat can be equipped with air suspension. The cabin offers comfortable seating for six passengers, unobstructed visibility in all directions, a large opening sunroof, easy access from bow to stern via the cabin and good standing height - features that make the boat convenient and comfortable to use in all conditions. Loading cargo and necessities into the cabin is made easy by the wide sliding door in the stern. Smart technical solutions ensure that the sliding door is easily operated even in colder conditions.

Condor Cabin can be customised to suit the boater's specific needs with the help of a variety of optional accessories. Safe operation in dim conditions is ensured by, for example, an efficient LED light bar on the cabin's roof-front and work lights on the aft deck. The cabin's effective heater makes rides enjoyable also during colder months. For enhanced comfort and seaworthiness, especially on open seas, accessories like an automatic trim system and air suspension seats are highly valued. For recreational use, a refrigerator, curtain set and dual battery system increase the level of comfort.

Thanks to its non-existent planing threshold, the Condor Cabin runs smoothly and fuel-efficiently even at low speeds. The boat is powered by Honda's new BF350 outboard engine, which represents the latest in cutting-edge technology and design. Thanks to the engine's fuel-saving lean burn technology and the large 310-liter fuel tank, the boat's range is approximately 250 nautical miles. Top speed is around 50 knots with 350 horsepower. The refined details and functionalities enhance the user comfort in daily use.

Its utilisation of space, the large stern deck and extensive customisation options make the Condor Cabin an ideal choice for demanding professional tasks, maritime commutes and recreational use, even for fishing purposes, in coastal regions and on vast open waters. Silver Condor Cabin truly sets a new standard for cabin boats in its size range. The novelty is an unbeatable combination of practicality, comfort and performance, proudly made in Finland.

The new Silver Condor Cabin will be premiered at the Helsinki Vene25Båt boat show in February 2025. We warmly welcome you to stand 6h48!
