SILVER EXPANDS THE HAWK SERIES WITH TWO BOAT MODELS IN PURE ALUMINUM

Silver is introducing two new models to the Hawk series – the dual-console BRX model and the SCX model with a side console. These durable and versatile new additions continue the legacy of the legendary Silver Hawk, a favorite among boaters, summer home owners and anglers already for decades. The new pure aluminum models will make their debut at the Helsinki Vene 25 Båt exhibition, which takes place February 7-16 2025.

Silver Hawk was the first model series manufactured by Silver and has remained a crowd favorite since its launch in 1991. To date, over 10 000 boats bearing the Hawk name have been produced, making it one of the most popular aluminum boats in the Nordic region. The current model range favorite, Hawk BR with a fiberglass interior, is now joined by the pure aluminum Hawk BRX and SCX boats. These new additions combine modern design, high-class performance, and practical features for active boating and sports fishing.

BRX and SCX – Versatility with unique strengths

Silver Hawk BRX is a pure aluminum bow rider with a dual-console layout, featuring an open and adaptable front deck and a wide, opening windshield. Thanks to its sheltered cockpit, this model is ideal for leisure boating, commuting, watersports and recreational fishing, offering ample space and customizable solutions.

The sister model, Silver Hawk SCX, stands out with its wide side console and single-piece side door, providing enhanced wind protection for the driver and passengers. The side console layout allows for easier movement around the boat, particularly when operating the boat solo, while the centrally positioned driver's seat ensures optimal balance also when navigating alone. The console provides ample space for multiple chart plotters, displays or additional electronics. Thanks to its spacious front deck, the SCX model is particularly well-suited for active fishing and as a commuter boat.

Both boats feature a versatile stern bench solution that can be used as a comfortable sofa or easily be transformed into a large and even casting platform.

Style and practicality as standard

Both the Silver Hawk BRX and SCX come with a comprehensive set of standard features that enhance both style and functionality. Standard equipment includes black railings that improve onboard safety while giving the boats a modern and sleek look. The top surface of the seat benches and swim platforms are covered with Smartdeck[®] EVA material, ensuring comfort and safety in all conditions. The driver's and co-driver's new sport seats provide excellent support and comfort even on longer journeys. Additionally, both models feature a spacious and adaptable stern deck, making them easy to adapt for both leisure boating and fishing.

Designed also with anglers in mind

Beyond commuter and leisure use, the new Silver Hawk BRX and SCX models are designed to also meet the needs of avid anglers and sports fishing enthusiasts. Their fishing-focused standard features and numerous optional accessories make the Hawk models highly versatile fishing platforms. Available accessories include i.e. a side-mounted bow engine bracket, shorter side windows for live imaging sonar, a bow casting deck and a multi-purpose accessory arch for the stern. By removing the stern bench backrest, the rear bench and swim platforms transform into a large and flat, Smartdeck® EVA-covered casting deck. The boats also feature additional tubing to the bow, consoles and stern, for the purpose of convenient installation of fishing accessories and electronic.

Built for versatile conditions

The Silver Hawk BRX and SCX models are designed to withstand demanding weather and water conditions, and to endure the stony shorelines of northern Europe. Their robust, unsinkable aluminum structure and rigid hull without lifting strikes, ensure safe and comfortable rides with outstanding handling characteristics and great performance. The highly acclaimed Hawk hull glides smoothly and quietly on the water, cutting through waves with precision, providing a pleasant and secure boating experience regardless of weather conditions. Thoughtful ergonomics further enhance ease of use and confidence in all situations.

A long-term investment that retains its value

Silver is known for producing high-quality, versatile and durable boats that have earned a strong reputation among leisure boaters, commuters and anglers alike. Silver boats are not just reliable companions on the water but also a long-term investment in premium leisure time. Their strong reputation, meticulous design and high quality ensure that Silver boats retain their value well over time. Whether you're an enthusiastic angler, an adventurer of the seas or in need of a commuter boat, the Silver Hawk BRX and SCX offer an exceptional combination of performance, comfort and quality that will be appreciated for years to come.

We invite you to discover the new Hawk series models at the Helsinki Vene 25 Båt exhibition on February 7-16 2025. The Hawk BRX and SCX will be on display in stand 6h48, located near the Northern entrance.
